

a Evidence classes and interpretive roles

Evidence	Coverage	Observed result	Interpretive role
ULM STAT1/STAT2	3 contrasts	6/6 positive; 24-test $q < 0.05$	confirmatory observational
M5911	3 contrasts	3/3 NES > 3.0	response-set concordance
IFN-beta	2 donors	12/12 positive in each donor	descriptive context

Boundary: observational convergence; no causal regulator, direct binding or unique upstream stimulus

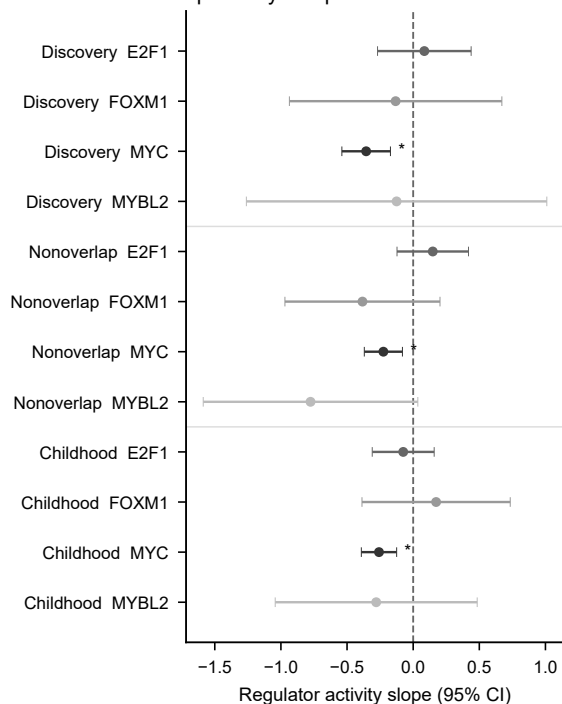

b

Core and extended IFN regulators

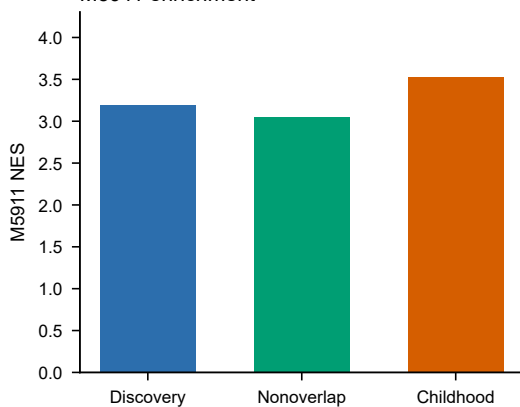

c

Prespecified proliferation specificity comparators

* global 24-test BH $q < 0.05$

d M5911 enrichment

e IFN-beta paired gene effects
